YOUR GUIDE TO
SELF-ASSESSMENT

COLLEGE OF NURSES
OF ONTARIO
Ordre des infirmières et infirmiers de l’Ontario
THE STANDARD OF CARE.
The *Quality Assurance: Your Guide to Self-Assessment* is an instructional guide developed by the College of Nurses of Ontario (CNO) to support you in completing your annual Quality Assurance (QA) requirements.

The guide provides information on the QA self-assessment tools (Practice Reflection and Learning Plan), instructions on how to complete the tools and next steps.

You are encouraged to refer to this guide when reflecting on your practice and completing your Learning Plan. The required QA tools are available electronically in the resource section at [www.cno.org/qa](http://www.cno.org/qa).
About CNO’s Quality Assurance program

CNO’s QA Program is based on the principle that lifelong learning is essential to continuing competence. Through QA, you are assuring the public of your commitment to continuously enhance the quality of patient care you provide. As a nursing professional, the public counts on you to demonstrate this commitment by engaging in daily practice reflection and setting and achieving learning goals throughout your career.

The *Regulated Health Professions Act, 1991*, requires CNO, to have in place a quality assurance program that consists of:

- promoting continuing education and professional development
- self, peer and practice assessment
- a mechanism to monitor participation and compliance

The QA Program is an important regulatory tool that supports CNO in achieving its strategic purpose: protecting the public by promoting safe nursing practice.

The obligation to maintain competence and to engage in ongoing professional development is also embedded in **Principle 3** of the *Code of Conduct*:

3.6

Nurses maintain and continually improve their competence. They reflect on their practice and set learning goals annually by participating in CNO’s Quality Assurance Program.
**Part A**

**Practice Reflection**

Practice reflection is the process of critically thinking about your practice and identifying your learning needs which will help you to engage in continuous learning.

Practice Reflection is an intentional and continuous process of critically thinking about your practice every day to help you identify the strengths in your practice and any gaps that require learning.

When reflecting, think about recent practice-related changes or experiences you encountered. Ask yourself:

- How do these changes or experiences impact your practice?
- What changed, if anything, in terms of how you do your work?
- What learning opportunities can you identify through your experiences that you can apply moving forward?
- What areas of your practice need professional development?

Additional questions to further guide your reflection can be found in the Practice Reflection webpage at [www.cno.org/qa-practice-reflection](http://www.cno.org/qa-practice-reflection).

You may also choose to reflect with a peer, your team or in a group setting. Group reflection provides opportunities to learn from each other, identify common goals and inform your own assessment.

Watch [How to become a reflective practitioner](#) for more information on how to reflect.
PART B: Developing your Learning Plan

Research shows that you are more likely to achieve a goal if you write it down. Having a Learning Plan allows you to write down your goals and track your learning activities and outcomes all in one place.

CNO has created a Learning Plan template for your use. You can access this tool at www.cno.org/qa/resources.
Step 1: Identify your learning gaps

Based on your Practice Reflection, you should have an idea of the areas in your practice that need improvement.

In your Learning Plan, document these gaps and explain how addressing them will help you improve your nursing practice.

You may consider asking for input from your colleagues from all settings to provide you a greater awareness of your strengths and make sure your learning gaps are relevant.

Examples of learning gaps:

“I find it difficult to keep up to date with changing guidance on PPE and infection prevention and control.”

“I often forget to review my patients’ medication list from home, I need to learn more about the medication reconciliation process.”

“I find it difficult to provide a concise report at the end of my shift.”
Step 2: Develop learning goals

Based on your areas of practice needing further development, document your learning goals. Writing clear, achievable goals is important to accomplishing what you want to do.

When defining your learning goals, think about each of these:

- the areas of your nursing practice you are going to address
- how your goals will improve your nursing practice
- the principles in the Code of Conduct that align with your goals
- if your goals are realistic
- a reasonable timeframe to achieve your goals.

There are many ways you can set your goals. One way is through the SMART goal setting process. A SMART goal is specific, measurable, attainable, relevant and time-limited.

<table>
<thead>
<tr>
<th>Specific</th>
<th>Measurable</th>
<th>Attainable</th>
<th>Relevant</th>
<th>Time-limited</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your goal should be specific. Try not to use vague phrases such as “I want to learn about…” If you are too vague, then how will you know when you reach your goal? Use an action word to describe what you want to achieve. Using an action word makes sure your goal is measurable. Here are examples of action words; identify, develop, plan, design, demonstrate, compare, describe, evaluate, explain, create.</td>
<td>A measurable goal is quantifiable, meaning you can see the results.</td>
<td>An attainable goal can be achieved based on your skill, resources and area of practice. Make sure your goal is realistic, given the resources that you have. A goal set too high may set you up for failure, whereas a goal set too low will fail to challenge and motivate you.</td>
<td>Make sure your goal is related to your practice. A relevant goal should apply to your current role and is clearly linked to your key role responsibilities.</td>
<td>Identify a reasonable time frame to complete your learning activities and achieve your goal. A time-limited goal will help motivate you to move toward your goal and to evaluate your progress.</td>
</tr>
</tbody>
</table>

Examples of learning goals:

“"I want to be able to demonstrate effective conflict management skills by September.”

"I want to be able to identify ethical conflicts in my work environment, and apply an ethical framework to assist my team with effectively resolving ethical conflicts by November.”

"I want to be able to explain how PHIPA (Personal Health Information Protection Act, 2004) applies to patient confidentiality on my unit. I will provide an in-service to my colleagues by October.”

Watch Are your learning goals SMART? for more information on developing SMART goals.
Step 3: Link learning goals to the Code of Conduct

After creating your learning goals, choose the principles from the **Code of Conduct** that relate to your goals. This is an opportunity to reflect and incorporate the Code in your practice. Once you have determined your learning goals and aligned them to the **Code of Conduct**, you can identify several learning activities for achieving your goals.

Step 4: Set out learning activities

Your learning activities should bridge the gaps in your knowledge which will improve the provision of safe nursing practice.

While determining your learning activities, think about what type of learner you are. Do you learn best by observing? Reading? Discussing? Choose learning activities that work best to keep you up to date and facilitate your growth and development. Your learning activities should have a timeline to keep you on track.

Once you have chosen an activity, document it in your Learning Plan. Your learning activity should be specific and based on what is realistic within your time frame.

**Examples of learning activities and activity statements:**

<table>
<thead>
<tr>
<th>Learning activities</th>
<th>Learning activity statements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Taking a course</td>
<td>I will participate in the NUR 101 Course on Therapeutic Communication at the St. George College starting March 10 until December 15.</td>
</tr>
<tr>
<td>Attending a specific in-service</td>
<td>I will attend the Infection Prevention in-service offered at the Public Nursing Hospital starting March 12.</td>
</tr>
<tr>
<td>Reviewing a specific organization policy</td>
<td>I will review my organization policies related to confidentiality; <em>Keeping Patient Health Information Safe and Privacy</em> starting June 10 until the end of June.</td>
</tr>
<tr>
<td>Being mentored by an expert</td>
<td>I will be mentored by the Medical Director at my clinic on prescribing medical cannabis starting January until the end of February.</td>
</tr>
<tr>
<td>Reviewing specific literature</td>
<td>Starting May 10, I will conduct a literature review on the complications related to peritoneal dialysis and read at least three articles by the end of May.</td>
</tr>
<tr>
<td>Reviewing specific best practice guidelines</td>
<td>Starting April 1 until April 30, I will review the 2018 Clinical Practice Guideline – on Diabetes from the Diabetes Canada <a href="http://www.diabetes.ca">www.diabetes.ca</a> website.</td>
</tr>
<tr>
<td>Being supervised</td>
<td>My nurse educator will observe me giving two administrations of iron infusion, from June 01 to June 10.</td>
</tr>
</tbody>
</table>

Once you have written your learning activities, you can start completing the activities and achieving your goals to support your continued learning.

Developing your Learning Plan is a continuous process. Make sure you review it on a regular basis and update it when you complete an activity and reach a goal. As you review your Learning Plan, you may need to make adjustments to your goals and activities.
Step 5: Evaluate

At the end of completing your learning activities, take the time to evaluate your learning. Reflect on what you have accomplished and how this new knowledge and/or skill improves the safe nursing care you provide. Determine how will you apply what you have learned to your practice. Remember learning is a continuous process that will happen throughout your career.

Next steps

Update your Learning Plan and note any changes or improvements to your practice. In some situations, you may not complete a goal, and that’s okay. You can always carry it forward into your Learning Plan the following year.

You should keep your final Learning Plan on file for two years.

For answers to frequently asked questions about CNO’s QA Program, visit www.cno.org/qa-faqs.

QA Self-Assessment checklist

- Reflect on your practice
- Document your learning gaps in your Learning Plan
- Determine and document your learning goals
- Link learning goals to CNO’s Code of Conduct
- Develop your learning activities
- Engage in your planned activities
- Track your progress
- Apply your learning in practice
- Evaluate your learning plan

QA Everyday

As professionals, nurses demonstrate their commitment to lifelong learning. QA is everyday.
